

Our factory blems (blemished) Tool-Tubes are every bit as serviceable and quality built as our non-blems. The finish just did not come out as we would prefer. Some have commented that they were surprised that we have marked them as blems. All of our factory blems will easily accept paint as well, should you want to customize your Tool-Tube to your bike's colors.

To purchase a blem, enter an order for a regular Tool-Tube, either standard clear anodize, or with the black powder-coat option (CAT), and then enter the code **BLEM20** at the prompt for the coupon/voucher code during checkout, towards the bottom of the checkout page. Your order total will be adjusted accordingly.

Discount codes and descriptions are as follows:

BLEM20 – Discounted 20%. The anodizing is non-uniform, sometimes appearing a little mottled, spotty or streaked, there may be a few very small pits, scuffs or scratches, but very small if at all.

**** PLEASE NOTE THAT THE DISCOUNT WILL ONLY APPLY TO TOOL-TUBES AND THE MOUNT THAT COMES WITH THEM.** If other items are added to the order, such as additional mounts or small parts, any discount applied to them will be removed. Sorry, but our coupon system cannot differentiate.
